Issues report for SecurityTest 1

in Issues Authenticator/IssuesAutenticator/ValidarUsuario

Summary

Started at 2017-12-11 22:21:50

Time taken 00:04:25.510

Total scans performed: 579

Issues found: 383

Scan	Issues Found In Test Steps		Total Issues Found
HTTP Method Fuzzing	usuarioValido	1	1
Fuzzing Scan	usuarioValido	100	100
Sensitive Files Exposure	usuarioValido	98	98
Weak Authentication	usuarioValido	1	1
XPath Injection	usuarioValido	20	20
JSON Fuzzing Scan	usuarioValido	100	100
SQL Injection	usuarioValido	28	28
Invalid JSON Types	usuarioValido	2	2
JSON Boundary Scan	usuarioValido	8	8
Invalid Types	usuarioValido	25	25

Detailed Info

Issues are grouped by Security scan.

HTTP Method Fuzzing

An HTTP Method Fuzzing Scan attempts to use other HTTP verbs (methods) than those defined in an API. For instance, if you have defined GET and POST, it will send requests using the DELETE and PUT verbs, expecting an appropriate HTTP error response and reporting alerts if it doesn't receive it.

Sometimes, unexpected HTTP verbs can overwrite data on a server or get data that shouldn't be revealed to clients.

Scan	HTTP Method Fuzzing

Severity	WARNING
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	OPTIONS http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1
Test Step	usuarioValido
Modified Parameters	**Name** / **Value**: method / OPTIONS
Response	*No content*
Alerts	Valid HTTP Status Codes: Response status code:200 is not in acceptable list of status codes
Action Points	You should check if the HTTP method `OPTIONS` should really be allowed for this resource.
Issue Number	#1

Fuzzing Scan

A Fuzzing Security Scan generates random content and inserts it into your parameters, trying to cause your API to behave incorrectly or reveal sensitive data.

Errors usually indicate that you have to improve input validation and error handling.

Scan	Fuzzing Scan
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1
Test Step	usuarioValido
Modified Parameters	**Name** / **Value**: Request / x5jO3DORBcz

Response

Content-type: text/html; charset=utf-8
Content length: 20606
Response is too big. Beginning of the response:

```
<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://

Issue Number #101

Sensitive Files Exposure

A Sensitive File Security Scan looks for files that tend to contain very sensitive information. It will generate an alert if it can download one of these files.

If such files are found, you usually need to either remove them from your system or restrict access to them.

Scan	Sensitive Files Exposure
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator/.ssh/known_hosts
Request	GET http://165.227.121.222:5000/validar_usuario_authenticator/.ssh/known_hosts HTTP/1.1
Test Step	usuarioValido
Modified Parameters	**Name**: path — **Value**: /validar_usuario_authenticator/.ssh/known_hosts
Response	*No content*
Alerts	Sensitive Files Exposure: Status code extraction error!
Action Points	You probably need to either remove the file `/validar_usuario_authenticator/.ssh/known_hosts`, or restrict access to it
CWE-ID	CWE-219
Issue Number	#102

Scan	Sensitive Files Exposure
Severity	ERROR
Endpoint	http://165.227.121.222:5000/.ssh/known_hosts
Request	GET http://165.227.121.222:5000/.ssh/known_hosts HTTP/1.1
Test Step	usuarioValido
Modified Parameters	**Name**: path — **Value**: /.ssh/known_hosts
Response	*No content*
Alerts	Sensitive Files Exposure: Status code extraction error!
Action Points	You probably need to either remove the file `/.ssh/known_hosts`, or restrict access to it

Response	*No content*
Alerts	Sensitive Files Exposure: Status code extraction error!
Action Points	You probably need to either remove the file `/db/development.sqlite3`, or restrict access to it
CWE-ID	CWE-219
Issue Number	#199

Weak Authentication

Weak Authentication Scans look at the authentication scheme and transport level security set up for your API and try to assess the risk that your credentials will be stolen or compromised.

Alerts indicate that you may need to change your authentication configuration or use stronger passwords.

Scan	Weak Authentication
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1
Test Step	usuarioValido
Response	*No content*
Alerts	• Weak Password Detection: null • Basic Authentication Detection: null
Action Points	• null • null
CWE-ID	CWE-311
Issue Number	#200

XPath Injection

XPath Injection Scans work through a list of predefined strings known to present problems for XPath parsers, and inserts those strings into the parameters of the request.

If an unexpected response is received, this is an indication that input validation has failed to remove the potentially malicious strings from the parameters, and that data should be sanitized before it is used to build XPath expressions.

Scan	XPath Injection
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1

JSON Fuzzing Scan

A JSON Fuzzing Security Scan generates random content and replaces values in a posted JSON body with this content, trying to cause your API to behave incorrectly or reveal sensitive data.

Alerts usually indicate that you have to improve input validation and error handling.

Scan	JSON Fuzzing Scan
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1

Test Step	usuarioValido
Response	*No content*
Alerts	Sensitive Information Exposure: null/empty response body
Action Points	Since random data inserted into the JSON body provoked an unexpected response, you may want to improve error handling in the code processing this input.
Issue Number	#221

SQL Injection

SQL Injection Scans work through a list of predefined strings that could be used to execute arbitrary SQL code in a database, and inserts those strings into the parameters of the request.

If an unexpected response is received, this is an indication that input validation has failed to remove the potentially malicious SQL strings from the parameters, and that data should be sanitized before it is used to construct SQL queries.

Scan	SQL Injection
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1

Invalid JSON Types

An Invalid JSON Types Scan tries to confuse the system under test by replacing values in a posted JSON body with incorrectly typed data, e.g. replacing a numeric value with a string containing letters.

Errors usually indicate that you need to improve input validation and error handling.

Scan	Invalid JSON Types
Severity	ERROR
Endpoint	http://165.227.121.222:5000/validar_usuario_authenticator
Request	POST http://165.227.121.222:5000/validar_usuario_authenticator HTTP/1.1
Test Step	usuarioValido
Response	**Content-type:** text/html; charset=utf-8 **Content length:** 29554 **Response is too big. Beginning of the response:** `<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd"> <html> <head> <title>sqlite3.InterfaceError: Error binding parameter 1 - probably unsupported type. // Werkzeug Debugger</title> <link rel="stylesheet" href="?__debugger__=yes&cmd=resource&f=style.css" type="text/css"> <!-- We need to make sure this has a favicon so that the debugger does not by accident trigger a request to /favicon.ico which might change the application state. --> <link rel="shortcut icon" href="?__debugger__=yes&cmd=resource&f=console.png"> <script src="?__debugger__=yes&cmd=resource&f=jquery.js"></script> <script src="?__debugger__=yes&cmd=resource&f=debugger.js"></script> <script type="text/javascript"> var TRACEBACK = 140339417877640, CONSOLE_MODE = false, EVALEX = true, EVALEX_TRUSTED = false, SECRET = "XFzTe4aYaJ21OVjSjEnb"; </script> ...`
